

ViDAL[®]

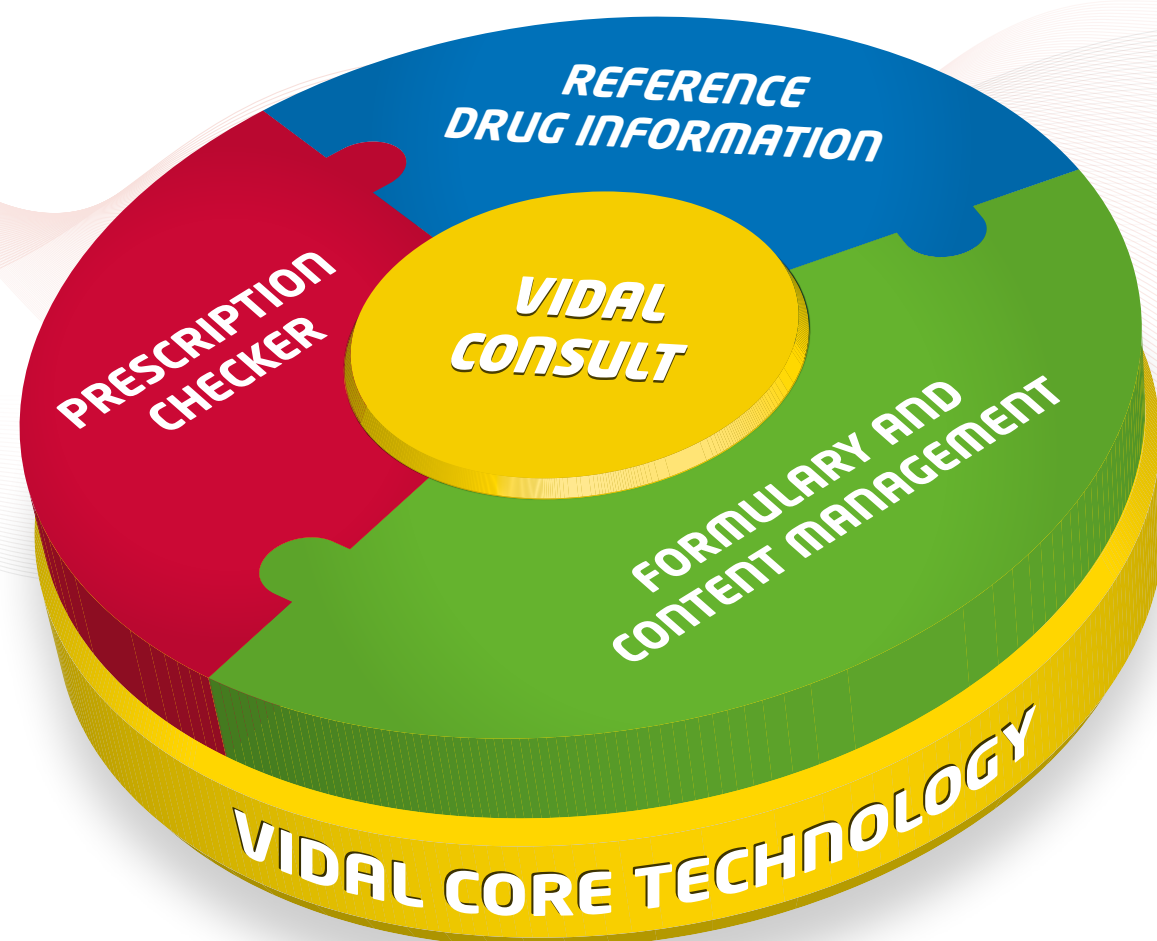

Drug Information Systems

CONSULT

V I D A L

VIDAL CONSULT is the VIDAL decision-support application designed for hospital and private practitioners. It includes complete reference information on drugs available on the market, helps control prescription safety, and allows for management and optimisation of the hospital formulary. Backed by 100 years of experience in the field of drug information, VIDAL Consult helps to improve the efficiency of patient management by providing healthcare professionals with access to trusted medical and scientific information on pharmaceutical products.

VIDAL CONSULT key functionalities

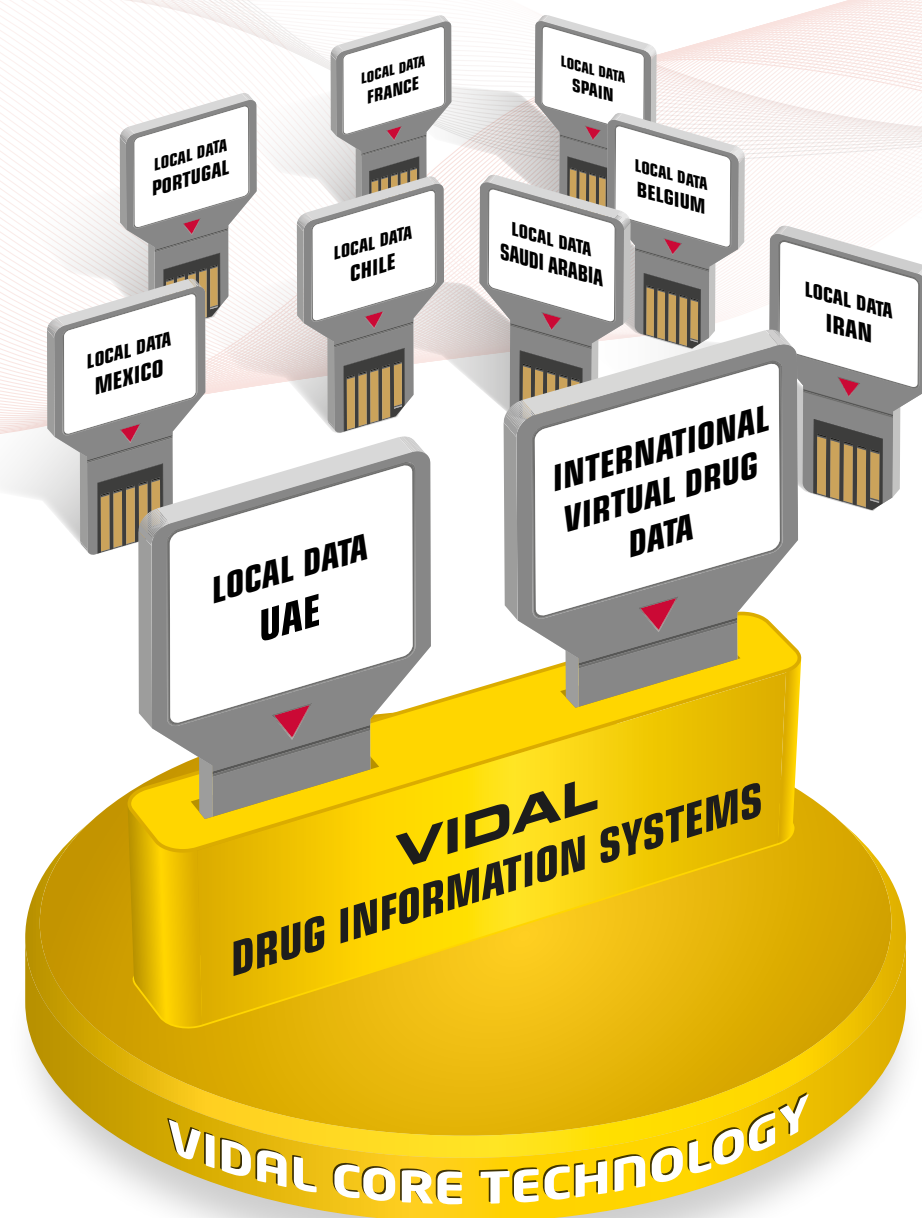

- 1 Access to reference clinical information on drugs
- 2 Access to foreign equivalent products (International Brands)
- 3 Prescription safety checking
(based on VIDAL Core's Decision Support Modules)
- 4 Hospital formulary management
- 5 Drug data annotation

C O N S U L T

VIDAL CORE TECHNOLOGY

VIDAL Drug Information Systems are underpinned by an international repository of Virtual Medicinal Products (VMP) linked to a broad semantic network detailing the usage, clinical effects, and potential risks for each drug. The information is highly structured and regularly updated by our team of pharmacists.

In each concerned country, VIDAL closely monitors the formularies issued by relative official health authorities and adapts its information to the local needs in order to provide healthcare professionals with a reliable source of information on the drugs that are accessible in their everyday practice.

Reference Drug Information

VIDAL CONSULT provides rapid access to reference clinical information on drugs, curated by a team of healthcare experts (pharmacists, physicians, pharmacologists) and based on national and international reference sources. With its powerful search engine processing all of these data, **VIDAL CONSULT** rapidly identifies specific search terms in 5 categories: Brand name, Active ingredient, Generic, Indication and ATC class.

As a result of VIDAL's expertise in structured and synthetic drug information, **VIDAL CONSULT** allows you to quickly access consistent medical and scientific information related to a product or ingredient via its innovative data sheets.

By entering a specific key word, view the results of the search in the different categories.

Easily browse the list of results in each category.

Prescription checker

VIDAL CONSULT allows you to check the safety of a prescription by detecting any intrinsic problems between drugs (Drug-Drug alerts) as well as risks related to the patient's pathophysiological profile (Drug-Patient alerts).

This function is based on the powerful Decision Support Modules provided by the **VIDAL CORE TECHNOLOGY**, alerting the user about drug interactions, redundant ingredients, contraindications, precautions for use and allergies related to the prescription context.

Add a drug to your virtual prescription.

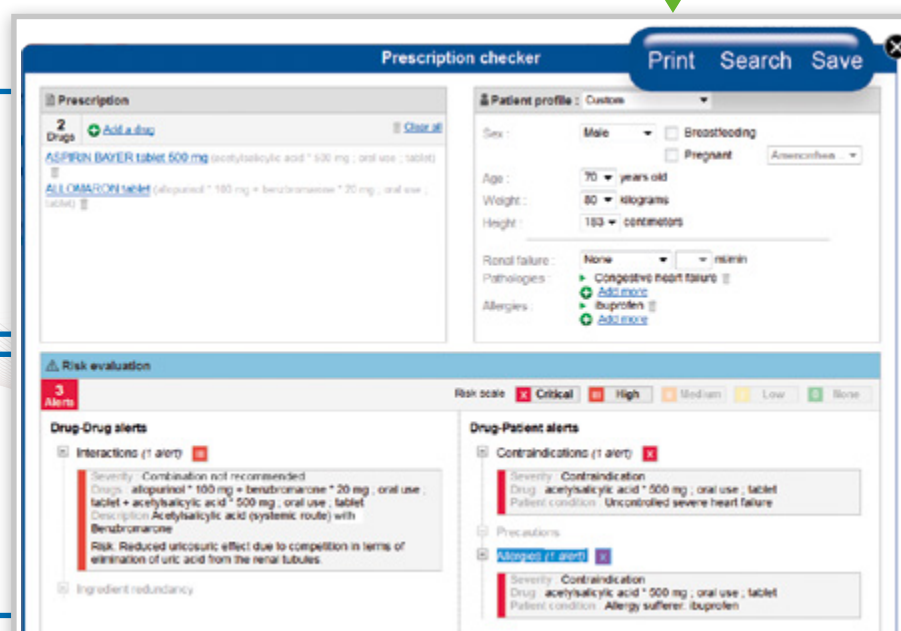

Check at a glance for the level of risk of a prescription for a given patient.

Access a control panel detailing the issues that have been detected.

Save or print the prescription context and the alert results.

View the virtual prescription and add drugs.

Identify the nature of the risk and the level of severity of the interaction.

Fill in the patient information according to the available pathophysiological criteria.

View alerts related to the patient's profile.

Formulary and content management

With its integrated hospital formulary management tool, **VIDAL CONSULT** allows all hospital practitioners to easily access all the drug references available on-site. Management of the formulary is optimized for the pharmacist who can intervene at any time on a drug item (creation, deletion, modification). Drug data sheets and ingredient data sheets can also be personalized in order to add specific information (warnings, best practice procedures, links to in-house resources, etc.).

Products in the hospital formulary are identified by a specific logo and are automatically positioned at the top of the search results list.

Content

VIDAL drug databases and Decision Support Modules are elaborated from validated local formularies and internationally recognized official sources (EMA, FDA, ANSM,...) by a multinational team of health experts in 8 European countries (pharmacists, pharmacologists, physicians, scientists, database architects, medical informatics specialists).

For the Middle East, the contents of the VIDAL database complies with the main official drug formularies in the region (HAAD, SFDA, DHA...) in order to provide healthcare professionals with a reliable solution adapted to the products to which they have access in their everyday practice.

VIDAL is present in many European countries and in 95% of hospitals in France. As the European leader in the field of drug information, VIDAL is also involved in many international health projects such as EPSOS (European Patients - Smart Open Services) and PSIP (Patient Safety through Intelligent Procedures in medication).

Technical configuration

Online application.

Please contact us if you wish to deploy **VIDAL CONSULT** on a local network.

Integration

VIDAL contents and Decision-Support Modules can be accessed by other software via the **VIDAL INTEGRATED** integration layer, allowing it to be perfectly embedded within Hospital Information Systems or ePrescription applications. For more details, please refer to the **VIDAL INTEGRATED** brochure.

VIDAL Group, part of AXIO Data Group, is a leading European healthcare informatics and information systems company. With a team of nearly 350 pharmacists, pharmacologists, physicians, researchers, health informaticists, database architects, and application developers, VIDAL Group provides hospitals, primary care physicians, pharmacists, and patients throughout Europe with on-line access to up-to-date drug databases and related treatment-based information.

VIDAL Group solutions are designed for both "solo" consumption and turnkey "ensemble" integration into existing healthcare information-processing system architectures. To this end, the company's products are currently embedded in over 400 medical software application software in Europe.
